08:30 AM - 09:30 AM (Bern time)

TA3.13
Developing national SDG indicators – what is the data situation for 'leaving no one behind' - producer and user perspective

Statistics Denmark & Statistics Canada — Organiser

YBhg. Dato' Sri Dr. Mohd Uzir Mahidin
Chief Statistician Malaysia

In line with the pledge in the resolution 'Transforming Our World: The 2030 Agenda for Sustainable Development' and its call to complement the global agenda, this session will discuss and share the challenges, best practices, experiences and outcomes at the regional and national levels by the Member States.

The Chief Statistician Malaysia has been invited to be one of the panellists in this session to share Malaysia's experience, efforts and challenges in developing national SDG indicators towards achieving the 2030 Agenda. The sharing will provide the knowledge and insight on how to organise a process, including a bottom-up process in defining additional indicators and how to ensure stakeholders involvement as well as the use of indicators in the perspective of Malaysia.

TA4.10
Re-strategizing labour market data collection, analysis and dissemination in time of crisis

Chair:
Ms. Betty Hasan
Senior Director of Institute of Labour Market Information and Analysis (ILMIA), Department of Statistics Malaysia (DOSM)

Speaker 1:
Ms. Noraliza Mohamad Ali
Senior Deputy Executive Director of Malaysian Bureau of Labour Statistics (MBLS), DOSM

Speaker 2:
Mr. Daniel Sim
Deputy Director, Data Collection, Ministry of Manpower

Speaker 3:
YBhg. Dato' Mohd Sahar Darusman
Head of the Employment Insurance System Office, Social Security Organisation, Malaysia

Speaker 4:
Ms. Farina Adam Khong
Deputy Director of Economics Department, Malaysia's Central Bank (Bank Negara Malaysia)

Discussant:
Mr. Kieren Walsh
Senior Statistician, International Labour Organisation (ILO)

Organiser:
Ms. Nur Layali Mohd Ali Khan
MBLS, DOSM

Introduction Session:
Labour market statistics is one of the key macro indicator that plays a pivotal role in a nation's socioeconomic development. These statistics are compiled, analysed and disseminated by the National Statistical Offices (NSOs) and National Statistical Systems (NSSs) of various countries to facilitate decision making processes by policy makers and enforcement agencies. In 2020, the COVID-19 public health crisis had affected the business environment and subsequently caused interference in labour market conditions. In this regards, the needs for data has become even more crucial to address the multiple labour market concerns resulting from the pandemic. The NSS are facing immense challenges to fulfil growing demands for granular and almost real-time labour statistics amid health protections restrictions. Thus, this session aims to gain insights on the responses and reactions of NSO and NSS as well as to discuss creatives solutions and evolutions encompassing modes and methods of data collection, analysis and dissemination.

Hari ke-1 #UNWorldDataForum 2021
Berne, Switzerland
3 Okt 2021 (Ahad)

Majlis Perasmian Terbaik #UNWDF2021 👍 .Saya gembira dengan prestasi & ceramah hebat tentang '' Adakah data memandu masyarakat? dan jika ya, adakah data akan memandu masyarakat sama sekali?'' Semua orang bertanggungjawab dengan data, dan penggunaannya.

Tahniah untuk video ini juga. 👏👏 '' Apa yang pernah dilakukan oleh statistik untuk kita?''. Sangat sukakanya 😍

Sesuatu untuk difikirkan...
✅ Anda mesti melihat fakta kerana mereka melihat anda.
✅ Jika anda ingin memperbaiki sesuatu, anda perlu mengukurnya.
✅ Statistik adalah titik penting rujukan.

United Nations World Data Forum 2021
(TA6.03) Beyond Open Data: What's Next For The Movement? (all virtual panel)
Tue. Oct 5, 2021
10:15 PM - 11:15 PM
Speakers: Jamison Crowell, Joel Gurin, Fernando Perini, Silvana Fumega, Natalia Carfi

Organiser(s): Open Data Watch (ODW)

The discourse on open data now focuses on how, not if open data should be implemented. A decade after the launch of the open data movement, many countries have launched significant open data programs. Beyond using open data for government transparency – the goal that motivated the movement in the beginning – governments, civil society and private-sector partners are using open data to inform their response to COVID-19, as well as support advances in healthcare, agriculture, transportation, education, energy, finance, climate mitigation and resilience, and other areas that are essential to sustainable development. While open data's value is now broadly recognized, the issues in using it have also become more clear. The use of open data has brought issues of data privacy, quality, interoperability, and governance into high relief, and required data stewards to develop new solutions. Recognizing these issues, Open data's proponents now work on strategies for sharing data in controlled ways as well as opening it fully. The open data movement has become more sophisticated, and has turned towards exploring how countries can harness the benefits of open data to achieve more strategic goals, such as using open data to promote data interoperability for SDG reporting, increasing data sharing with and between non-government data providers, and overall expanding the use, value, and impact of data. The proposed session, Beyond Open Data: What's next for the movement?, will bring together data experts to discuss the evolution of the open da#UNDataForum

POPULATION & HOUSING CENSUS MALAYSIA 2020
YOUR DATA IS OUR FUTURE

#MyStatsDay | | #MyCensus2020 | | #LeaveNoOneBehind

TA4.10

Due to crisis occurs, the system of data collection needs to utilise the usage of administration data. Collaboration with various agencies as well as cross agencies are needed to achieve timely and high frequency of data. Furthermore, in line with modernisation era, big data can be part of the information data source and machine learning could be another additional tool to complement each other. **DOSM Perlis**

TA4.14

We are now like pumping the information and data into the giant bottle, next we need to work on it on how to show the insight with what we have. It is essential to put the data in the right place to make it beneficial to everyone, so that no one is left behind. Besides, we also need to always keep an eye on the biased data since it is one of the challenges in producing trusted statistics.

BKS

TA4.10

The COVID-19 public health crisis has caused a domino effect in terms of business environment, hence, causing nationals labour market conditions. The session elaborated on how to collect quality data amidst the pandemic situation, increase quality in decision making and optimise the communication of data. **BPTMS**

Welcome to UNWDF 2021

If more people starting to communicate with data (analyse it, use it, share it, transfer knowledge), it will lead to data literacy in the population. Tendency in supplying a good data to NSO is at high level by organisation and people. Let's communicate.

BPHPP

TA2.18

Investing in statistics infrastructure and improving the quality of statistics methodology are important in order to obtain accurate and quality data.

DOSM Kedah

TA2.02

Tanzania is doing a good job in implementing data initiatives among various partnerships and parties at the national level. It sets a good example for other Global Southerners.

DOSM Selangor

TA3.01

Invest in training enumerator to collect data from person with disabilities. Before asking sensitive questions, start with the basic ones to build trust from respondents.

DOSM Wilayah Persekutuan

TA4.02

"Drone" is one of the useful satellite imagery in the UAE that provides support to agricultural precision and emergency response. It has also provided accurate data and supported decision making process.

DOSM Kedah

TA2.13

Fostering a stronger enabling environment - quantifying and communicating the value of household surveys, promoting legislative support for data integration, investing in ICT infrastructure, moving towards a more diversed skills, investing in capabilities for remote technical assistance, pursuing a coordinated and systematic approach in supporting national statistics and sustaining financing for national surveys and global public goods.

DOSM Terengganu

TA2.17

In order to monitor a real-time progress of the COVID-19 vaccination supply chain, adapting available systems will ultimately be the way forward. E-commerce platforms can give insight into shipment visibility, smart routing and demand forecasting. Data-sharing platforms must be available to monitor potential risks, such as disruptions in supplies.

BIPD

TA4. 13

NSOs need to play a role in assisting vaccination programs with providing complete data to the Government such as population and demographic information.

BPAN

TA2.06

Data driven analysis and solution are crucial for addressing global challenges in an evidence-based approach. Semantic interoperability is an enabler for integrating data, as it resolves the ambiguity in terms definitions. FAIR (Findable, Accessible, Interoperable & Reusable) vocabularies are needed for semantic interoperability and can be used as data bridge. More guidelines, tools & trainings are needed to facilitate the use of open standards and machine-readable formats for FAIR vocabularies and broader data sharing.

CTBDA

TA2 13

COVID-19 pandemic completely upended survey landscape, eventually has disrupted the major NSO's operations especially for household survey. Adoption of emerging technologies by investing in ICT infrastructures such as CATI, CAPI, CAWI and mixed-mode surveys are the choices for the collection. Besides that, to gain cooperation from respondents, psychology and sociology of respondents need to be addressed.

DOSM Perlis

TA3.19

The key point of this session is 3W (Why collect data, When the data is being used and Why collect data that has not been used). The cooperation between government sector and private sector is needed. Building trust in the statistical system is needed to acknowledge why the data is collected and the privacy of data is secured.

DOSM Terengganu

TA5.04

The government is accountable to promote AI, human rights to privacy and providing remedy through some form of legislation and to monitor the use of AI. The governance of AI involves gaining trust from the society.

BMP

TA2.18

New innovation, cooperation, opportunity, networking, connection and timeliness are important to increase expectations and valuable input for stakeholders and other users.

DOSM Kedah

TA04.03

Standards and best practices for data collection can prove the usefulness of data for robust policymaking and to promote trust among stakeholders. It is also important to ensure the knowledge of retiring staff is being transfered to newly recruited staff in hydrology.

BPPIB

TA4.10

The needs for high-frequency data from other sources is becoming more crucial as it allows the tracking of real-time labour market impact to facilitate policy making process.

BPHPP

POPULATION & HOUSING CENSUS MALAYSIA 2020

YOUR DATA IS OUR FUTURE

#MyStatsDay | | #MyCensus2020 | | #LeaveNoOneBehind

TA2.18
The emergency situation has taught NSOs to be agile and adaptive, in a way they are able to play a key role in the management of emergency events. NSOs must invest in utilising new sources of information such as Big Data and design business processes that are resilient and able to be re-configured.

MBLS

TA4
Non traditional data source is convenient while traditional data collection is difficult. The reason is because traditional data collection tend to get exposed to data manipulation and it takes a longer time to collect large data pool such as on national level. The time spent for data collection should be minimised so that time can be spent in improving quality of reseach.

BPE

TA1-5.01
Natural disasters imply a setback in the fulfillment of SDGs, given that their consequences are reflected in the deterioration of people's life quality. Therefore, multi-stakeholder partnerships are needed to remove the barriers and harness the power of data.

BPP

TA3.16
Since the outbreak of COVID-19, emerging data and reports from those on the front lines have shown that all types of violence against women and girls, particularly domestic violence, has intensified. More action needs to be done to prioritize addressing violence against women in COVID-19 response and recovery efforts.

BPTMS

TA3.18
OpenStreetMap is a collaborative project to create a free editable map and source of geospatial data. Humanitarian OpenStreetMap Team is working to ensure map data is accessible and used in decision-making process that saves and improves lives.

BIPD

TA6.01
To make people understand data and statistics, data professional need to be able to explain data in understandable manner to the public.

BKS

TA3.13
Enhance the cooperation with the local authorities in order to have more granular and timely statistics. In designing SDG indicator, all data from other agencies should be easily accessed to identify which data are available and suitable to treat as SDG Indicator.

DOSM Kedah

TA2.18
It is important for a country to achieve consensus between government, businesses and civil society on the data system. Besides, similar statistics that are published by different agencies or alternative sources should not have big gap or differences.

BPP

TA4.14
Data integration is important for modern business because it has the ability to improve collaboration and data sharing; increase productivity by reducing errors and rework; significantly save time by reducing the need for manual data gathering and analysis; and deliver more valuable data insights and business intelligence.

BMP

TA5.09
Like other data, microdata is a public goods: virtually costless to disseminate once they have been collected and not diminshed by use. As a public goods, they can be used and reused many times, each time increasing the social and economic benefits from new products and services created or, more indirectly, from efficiency gains and the reduction of transaction costs.

BKS

TA4.08
Instead of an unconditional focus on technology, NSOs need to consider breaking down data silos, meeting user demand for datasets, as well as ensuring data usability for long-term planning and monitoring for their context.

BKS

TA4.01
Administrative data is the better resource to be used during the pandemic where collection of data is being stopped. As a conclusion, data is very important in many ways for the government. Lets build a better world with data.

DOSM Perlis

TA3.05
NSOs need to produce a high quality socioeconomic microdata and analysis at sub-national, national, and regional levels to assist and improve policy processes and response.

BMP

TA2.15
Need to enhance collaboration between institutes in the data ecosystem

BMP

TA4.10
Coverage, accuracy, timeliness, cost-effectiveness and policy-relevance of HH surveys are the main consideration despite diminishing response rates brought on by urbanization and higher income level, coordination failures within the overburdened statistical system as well as lengthy questionnaires that can trigger respondent's fatigue.

DOSM Terengganu

TA4.13
A good data visualization can help the government in making a good strategy and not just that, we can also measure the impact of COVID-19 towards the economics through data analysis.

BPAN

TA2.16
Official statistics should be complemented with the participation of local actors, being capable of identifying local drivers of inequality and marginalisation in order to support SDG monitoring and also policy making.

DOSM Kelantan

TA1-5.02
Streamlining operations, improving efficiency, and increasing productivity by using big data can advocate significant cost savings to an enterprise and positively impact overall profitability.

BPE

POPULATION & HOUSING CENSUS MALAYSIA 2020
YOUR DATA IS OUR FUTURE

#MyStatsDay | | #MyCensus2020 | | #LeaveNoOneBehind

TA1-5.02
Indeed it is a high time for the NSOs around the world to start using data from other sources available online. However, traditional data are still important in measuring official statistics. We cannot discard data gathered from the ground.
BPHPP

TA4.12
Learned from the COVID-19 crisis about the governance on the needs of findable, accessible, inteporable, reusable (FAIR) data.
BPPIB

TA5.08
Government need to identify childrens who have problems in accessing education especially during this pandemic. Government also need to improve data by focus more on Internally Displaced Children 's (IDP) education. The actual number of IDPs children who need education need to be known to make sure there is no children left behind and this children needs to be reachead immediately.
BPTMS

TA5.09
Enhance the communication and good practice as well as keeping the information confidentially
DOSM Perlis

TA2.13
Phone surveys are less expensive, more flexible tool to fill data gaps and adapt to changing needs. Continuous use of phone surveys for routine and crisis monitoring has several requirements. Therefore, methodological research is needed to improve this survey mode.
DOSM Terengganu

TA6.01
The most important point is to have a resilient and agile data ecosystem that is needed to achieve the SDG and respond to a crisis like a pandemic or others, the organizations need to institutionalize, leverage and unleash the power of partnership.
BIPD

TA1.07
The need to bring together governments, agencies and operators to build a shared understanding of capacities, needs, and challenges. Once understanding has been established, stakeholders will begin to identify potential areas for collaboration and broker partnerships that allows them to put projects in motion. Finally, as part of the initiatives stakeholders will work together toward the achievement of key elements: product adoption, sustainability and replicability.
BMP

TA6.02
Data clarification and easy-access of data sharing improve the quality of data. More agreements with international cooperations are needed to realize this ultimate goal.
BPTMS

TA4.13
In the realm of data, there needs to be a new framework with new partnerships and rules of business with adequate attention to data privacy for an improved data ecosystem. The pandemic has created a greater opportunity to redesign a more resilient national healthcare system and social protection system.
BPAN

TA5.11
Strengths of the participatory approach are: it provides the opportunity for solid partnership with non state actors in production of statistics; it acts as the vehicle for statistics advocacy & capacity building and can enhance the confidence of the public in statistics.
DOSM Terengganu

TA1-5-02
The use of big data is not a substitute to traditional sources of information. It plays a complementary role with supportive information. We can use satellite images, call detail records, social media sentiments, mobile phone data as nontraditional data source as timely and innovative knowledge to evaluate especially during times of crisis.
BPHPP

TA3.13
Bottom-up data collection from local to national level can build a quality assurance tool to use and assess data.
BPHPP

TA3.13
Enhancing engagement with local authorities to improve data disaggregation and data availability at the smallest area.
MBLS

TA4.12
From this session, we learned that data governance becomes crucial due to pandemic COVID-19. Sharing from Patrick J McGovern, there are 3 things to strengthen data partnership and those are are responsive, resilient and inclusiveness.
BPPIB

TA6.03
One of the issues to be highlighted is about Privacy. Privacy concerns are at the forefront of debates about data, and publishers of open data are struggling with identifying and addressing potential privacy issues. Privacy rights are complex and are not absolute. There is often a balance to strike between transparency and privacy when government information about individuals is involved. Striking this balance requires training, resources, and combined commitments to respect privacy and advance openness.
BPE

TA6.01
The international statistical community started to think in a creative manner of the use of data from non-traditional sources and collect data on non-SDG statistical indicators. This step was the first step in implementing the data revolution which is a dramatic change in the history of official statistics and in the nature of the work of the national statistical offices the whole idea of initiating a union where data forum began with a decision by the UNSC that a forum on sustainable development data would be the best platform for intensifying cooperation with various professional groups including NSO's private sector and data scientist.
BMP

TA4.06
The SDG monitoring platform focused on simplicity and flexibility where it is multilingual, interactive with various visualization, easy to use and to disseminate as data and metadata are downloadable.
https://unstats.un.org/sdgs/unct-toolkit/
DOSM Wilayah Persekutuan

TA5.11
Strengths of the participatory approach are: it provides the opportunity for solid partnership with non state actors in production of statistics; it acts as the vehicle for statistics advocacy & capacity building and can enhance the confidence of the public in statistics.
DOSM Terengganu

TA2.16
The main agenda of Leaving No One Behind (LNOB) Partnership is making voices heard and count. Data partnership needs to be well prepared and managed carefully. Institutional arrangement between partners, institutional responsibility, roles and functions need to be known, aligned and regarded to guarantee the success of this partnership.
DOSM Kelantan

United Nations
WORLD DATA FORUM

BERN, SWITZERLAND
3 – 6 OCTOBER 2021

Despite the impact of the global pandemic that has affected many events, this year **UN World Data Forum 2021 has successfully** conducted in hybrid session.

This forum has been a **centre that connects colleagues** from different parts of region.

The opportunity **to network and gain knowledge** with other statisticians and committees from around the world would mean a **great learning experience for us.**

Congratulations
for the
enormous successful
event!
